SM1500 - Power Sink Option

2 Quadrant operation: Source and Sink

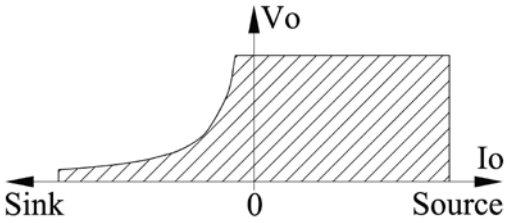
SM52-AR-60

Models	Order-Code
SM 15-100	Option P202
SM 35-45	Option P203
SM 52-30	Option P204
SM 52-AR-60	Option P205
SM70-22	Option P206

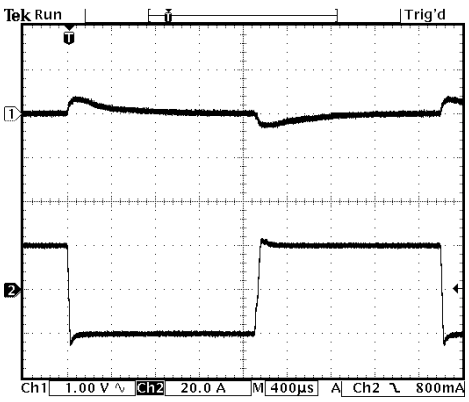
Order code table

The Power Sink Option permits the power supply to absorb bursts of power fed back to the unit. An internal module senses the status of power supply and sinks current across the output terminals, thus maintaining a constant output voltage.

The Power Sink Option allows a faster response when the power supply is step programmed to a lower voltage at low load conditions.

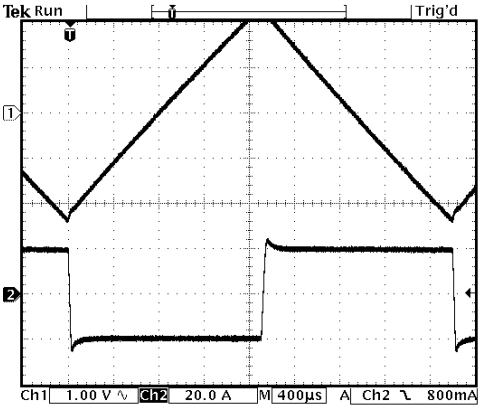


- Can absorb up to 200 W peak power
- Maintains output voltage setting regardless output power is positive or negative (source and sink)
- Ideal solution for supplying electric motors with PWM-speed control. These systems often return power to the power supply during a braking action
- Ideal solution for ATE systems requiring fast down programming at no load conditions
- Generation Automotive waveforms (fast)



*SM35-45 **with** Power Sink Option*
Current –20 A means the load delivers 20 A to the power supply (sink operation)

Upper trace: output voltage
Lower trace: output current
(current switching from +20 A to –20 A at Vo=6 V)



*SM35-45 **without** Power Sink Option*
*The output voltage is out of control when the output current is **negative***

Upper trace: output voltage
Lower trace: output current
(current switching from +20 A to –20 A at Vo=6 V)

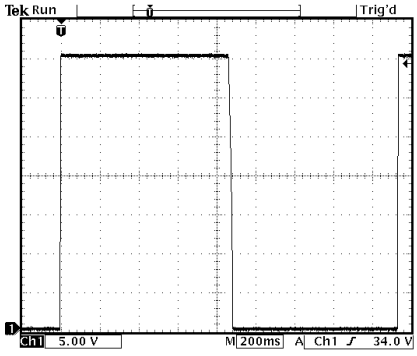
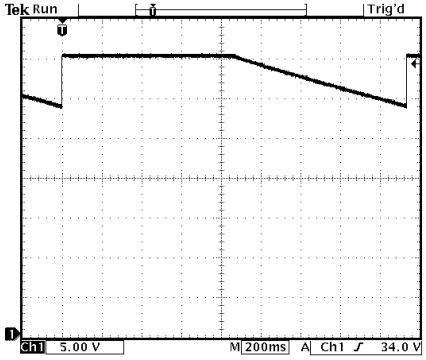
Parallel and Series operation Refer to power sink manual for details and restrictions.	Using multiple units in parallel operation, only one unit can have a power sink. Using multiple units in series operation, all units must have a power sink.				

Notes: *- The maximum sink current at higher voltages will not be the maximum specified current due to the power limit. For example, at 30V, the max sink current will be 6.7 A (30 V x 6.7 A = 200 W = max power).*
- A higher sink current than the maximum current will cause the output voltage to rise.



*SM35-45 **with** Power Sink Option*
fast discharge of output capacitors
by Power Sink circuit

Trace: output voltage
Voltage Programming Speed at NO LOAD



*SM35-45 **without** Power Sink Option*
slow response time during voltage step down,
time needed to discharge the output capacitors

Trace: output voltage
Voltage Programming Speed at NO LOAD
